TorrServe

Download torrent files.

Application for downloading torrents as `HTTP` files. **If your provider blocks torrents, be careful**. The cache is stored in `RAM`, so the internal memory is not damaged. The application consists of two parts, a server and a client, this is a client for Android. Server source: https://github.com/YouROK/TorrServer

After first load, you need to download server from `Updates -> Update server from network` or choose any remote one.
